

# WELCOME AND INTRODUCTION

Welcome to the open house for the Lilyfield Quarry extension. Your feedback is crucial in helping us shape the future of the quarry in a way that benefits the community.

Lilyfield Quarry is a limestone quarry located in the **RM of Rosser**. The quarry has been operational since **2020** and is vital for supporting infrastructure and construction projects across Manitoba.

The site is situated between Sturgeon Rd. and Summit Rd. Entrance off of #68 – East off of PR 236.

Lilyfield Quarry in Operation

# PLANNING CONTEXT

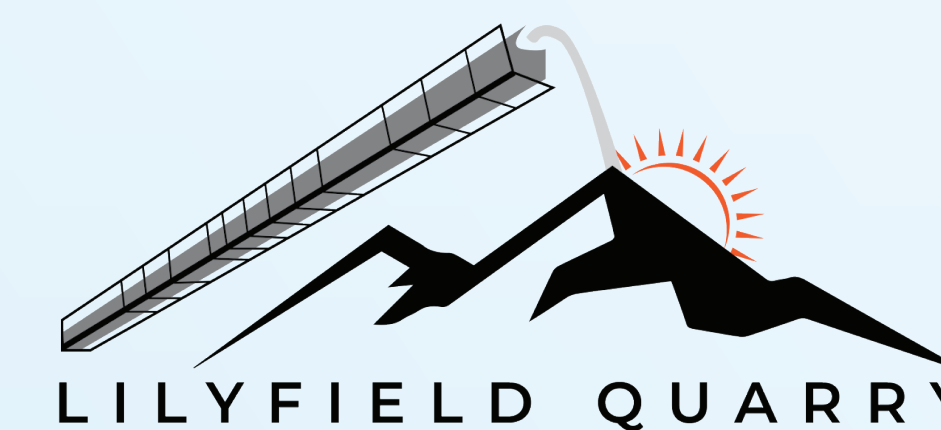

Lilyfield Quarry's aggregate extraction operation is subject to several Provincial regulations including *M162 - The Mines and Minerals Act*. It is also bound by a signed development agreement between the Municipality and Lilyfield Quarry Inc.

- Lilyfield Quarry 
- RM of Rosser 
- Property Assessment 
- Rural/Agricultural 
- Rural Residential 
- Residential 
- Commercial 
- Industrial 

The quarry and its development comply with all Provincial and Municipal regulations and plans. The subject lands are zoned "A80" Agricultural Zone and a conditional use for quarry operations is required.

& Associates Ltd.

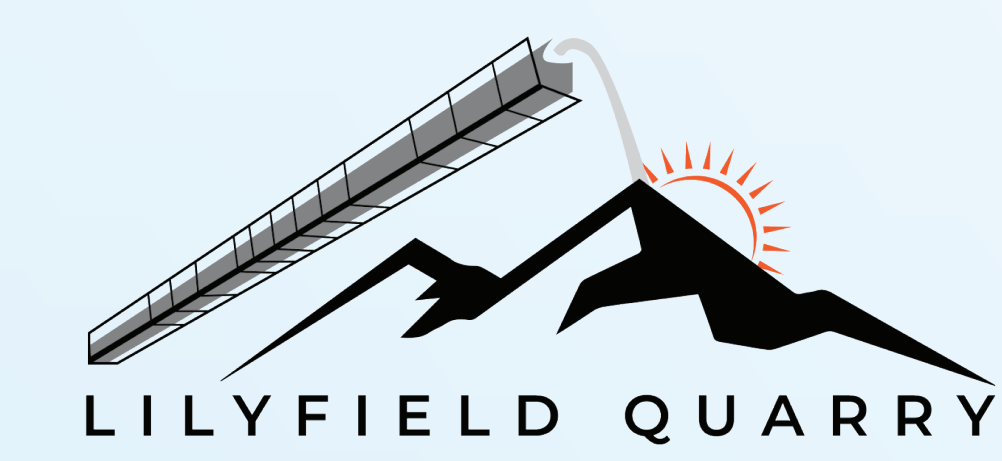

# REGULATIONS

The quarry has been operational since 2020 after receiving all required approvals from the Province and the municipality. It operates under strict compliance with Provincial and Municipal regulations, ensuring that all activities are conducted responsibly and sustainably.

The quarry operation must adhere to blasting time restrictions and standards, noise and sound attenuation berming, ensuring appropriate visual conditions, and ensuring water and natural resource conditions are protected. Finally, the quarry operation must rehabilitate the impacted quarried areas to Provincial standards. The quarry operation is monitored by both the Province and the Municipality to ensure compliance.

# IMPORTANCE OF AGGREGATE EXTRACTION

Extraction of aggregate (a non-renewable resource) is a key requirement in all infrastructure, construction and transportation improvement projects, including those that are publicly funded. As such, access to it in a timely 'in demand' manner, is a critical component to ensuring the economic prosperity of the Province and contributing to the quality of life of Manitobans.

To ensure this important infrastructure remains affordable and the carbon footprint invoiced in transportation is kept to a minimum, these natural aggregate materials must be sourced locally – close to where they are used.

# EXTENSION OF EXISTING QUARRY

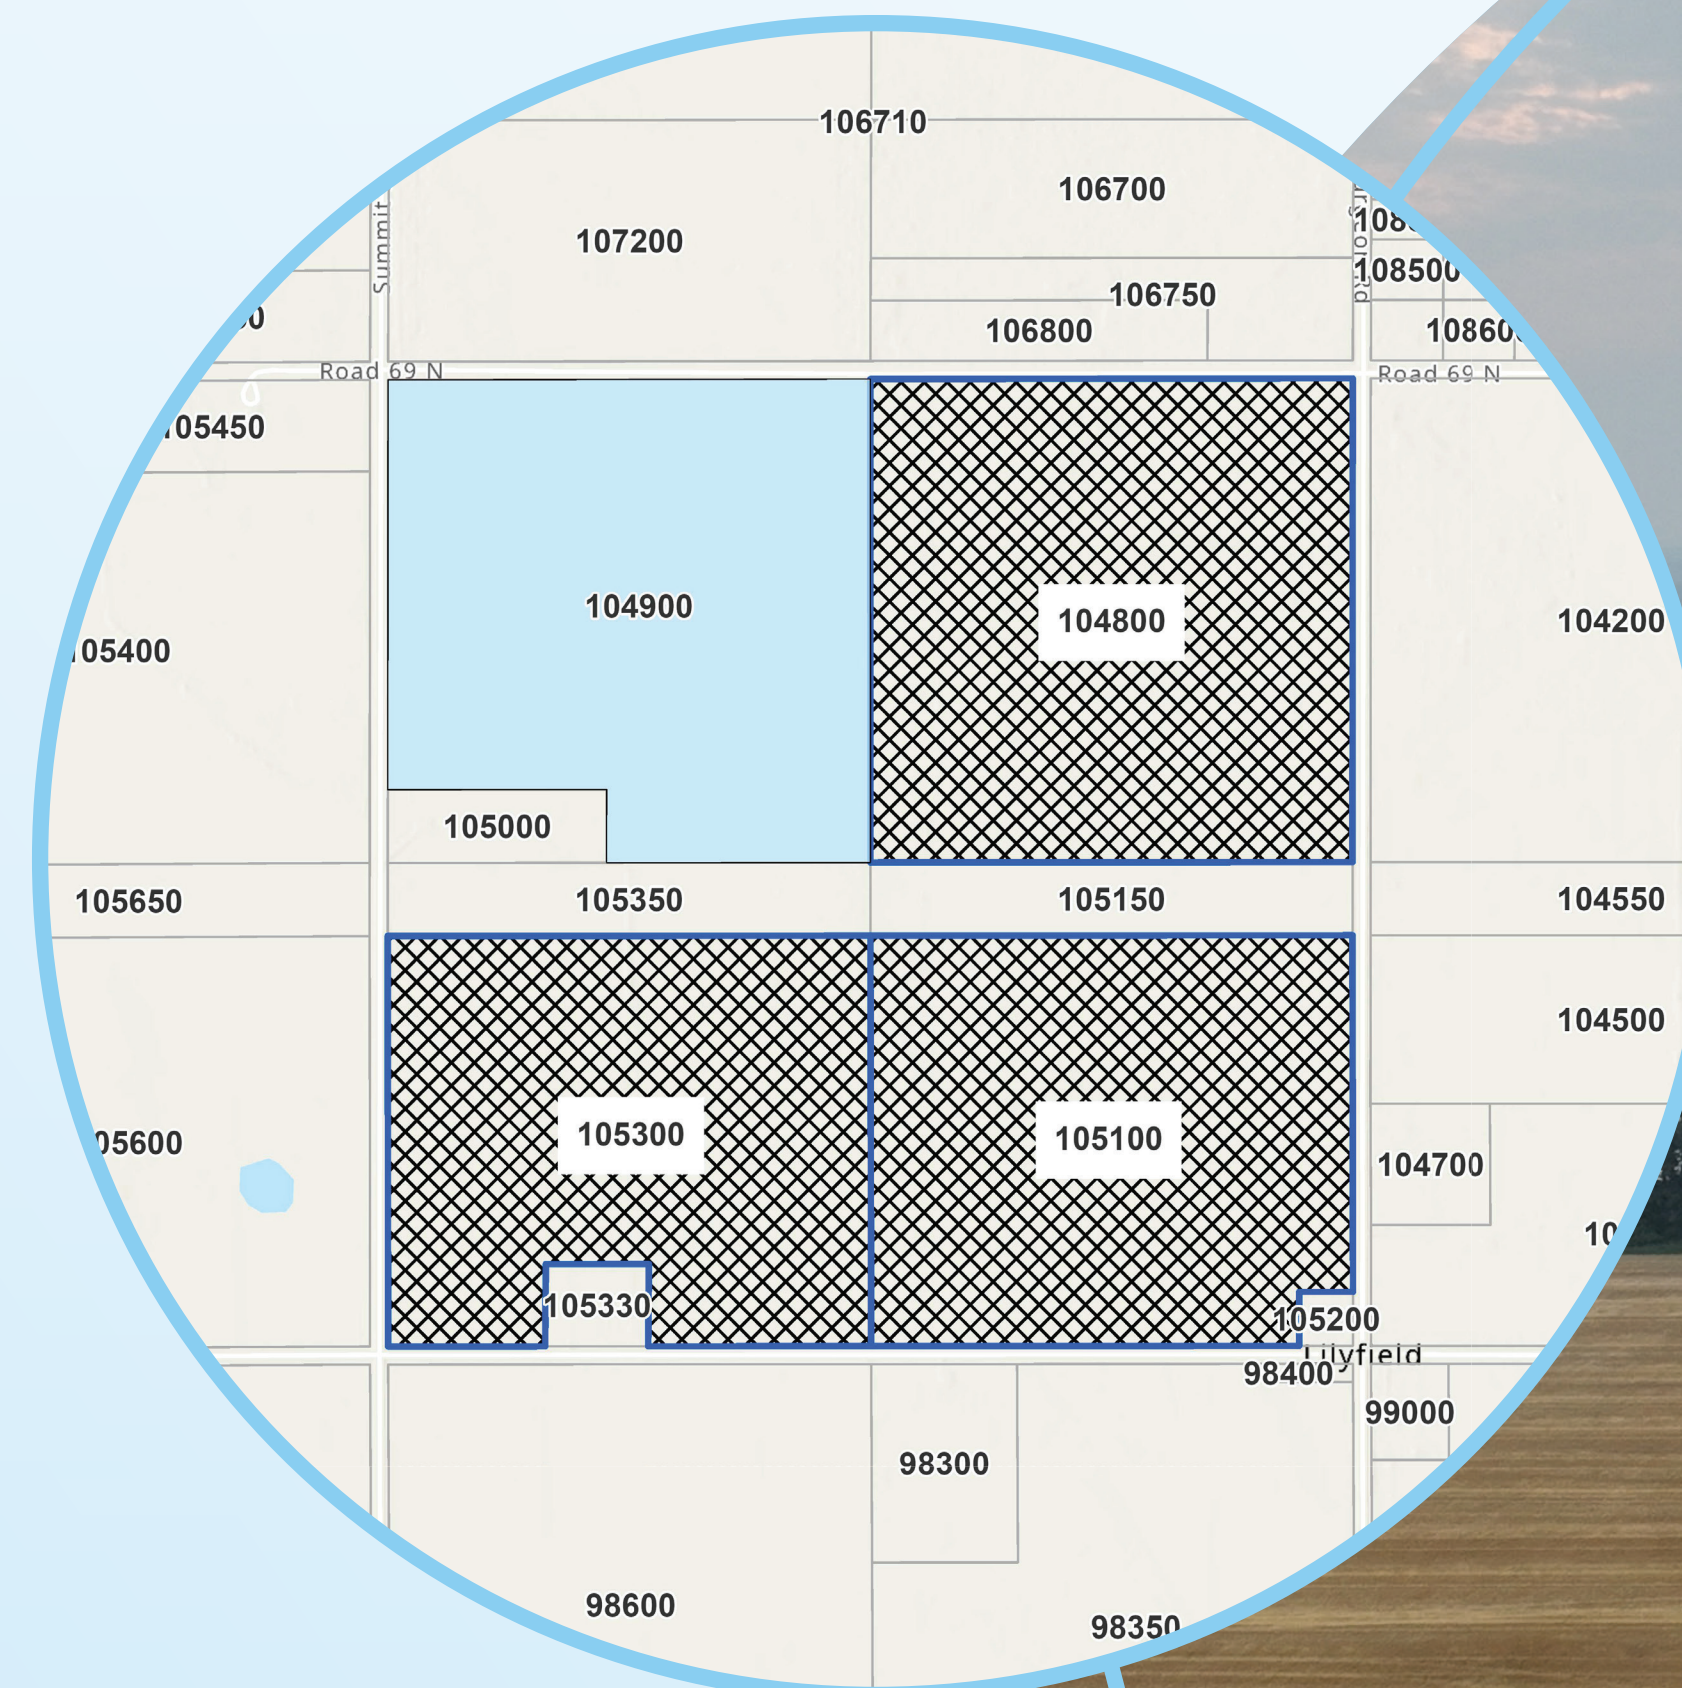

The extension of Lilyfield Quarry is the next logical step in the quarry's operations and will be going through a conditional use application with the RM of Rosser. This conditional use will allow the 104900 section adjacent and contiguous to the existing quarry operation to be extracted.

Lilyfield Quarry extension will be operated with the same safeguards as per the existing quarry operations, such as regulated truck routes, blasting schedules, and environmental protections, including progressive remediation.

Lilyfield Quarry Inc. is affiliated with the Munro Group of companies, which consists of Hugh Munro Construction Ltd., Fort Whyte Lowbedding, and ClearSecure RockGlass. Hugh Munro Construction Ltd. is a heavy civil construction company that has been doing business for over 60 years.

# COMMUNITY ENGAGEMENT SURVEY

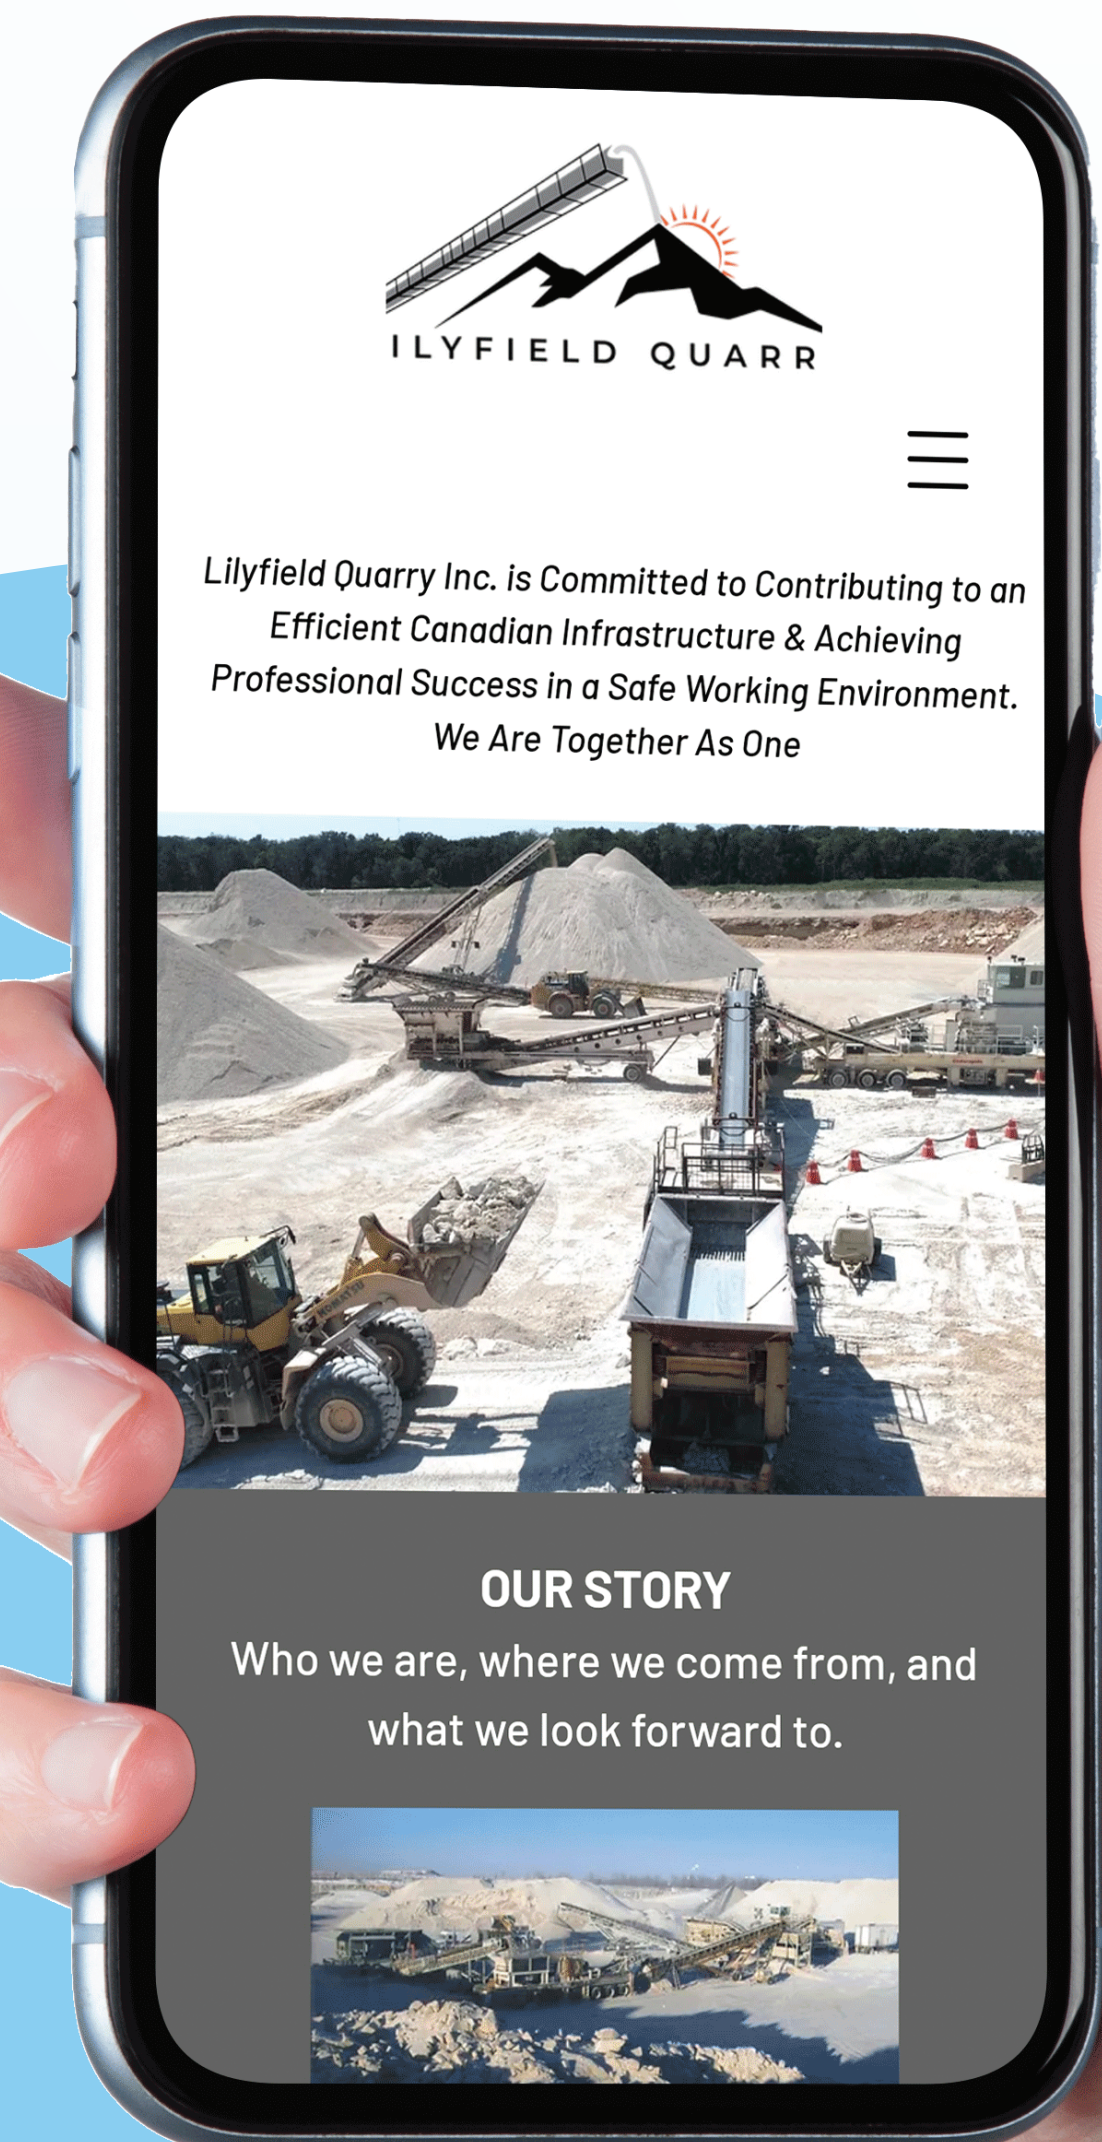

Please spend 5 minutes to leave a comment and share your thoughts on the extension of the Lilyfield Quarry.

The screenshot shows a survey form titled "Lilyfield Quarry Community Engagement Survey" by M Richard & Associates Ltd. The form includes several questions with radio button options and a map. Question 1 asks if the respondent lives in the RM of Rosser. Question 2 asks for the proximity to the quarry with a map and four distance options (A-D). Question 3 asks about the primary residence type. Question 4 asks how long they have been a resident. Question 5 asks how long they intend to remain. There is also a section for providing feedback and an email field for staying informed.
